

SƠ ĐỒ PIPELINE - 3 CHỨC NĂNG TIÊU BIỂU

Ví dụ — *Auth (Đăng nhập)*:

```
LoginCommand
-> LoginCommandValidator           % validate IdDisplay + Password
-> ValidationPipelineBehavior      % run FluentValidation
-> LoginCommandHandler             % verify BCrypt + generate JWT
-> AuthResponseDto                 % return access/refresh tokens
```

Ví dụ — *Share Media (Chia sẻ nội dung)*:

```
ShareMediaCommand
-> ShareMediaCommandValidator      % validate input DTO
-> ValidationPipelineBehavior      % sender must differ from receiver
-> ShareMediaCommandHandler        % create Share + Notification
    -> SignalRNotificationPusher   % push realtime to receiver
-> ShareResultDto                  % return standardized response
```

Ví dụ — *Notifications (Lấy thông báo)*:

```
GetNotificationsQuery
-> JwtBearer / [Authorize]         % authenticate current user
-> GetNotificationsQueryHandler     % query by UserId
-> NotificationRepository          % read Notifications table
-> IEnumerable<NotificationDto>    % map notification records
-> ApiResponse<IEnumerable<NotificationDto>>
                                     % return standardized response
```
